Peer Review Report

Peer review report 2 on “Is intramedullary fixation of displaced midshaft clavicle fracture superior to plate fixation? Evidence from a systematic review of discordant meta-analyses”

1. Original submission

1.1. Recommendation

Major Revision

1.2. Comments to the author

Intro

- * Needs proofreading by a native English speaker
- * Almost every sentence has a grammatical error
- * Content is ok

Methods

- * Confusing
- * Was your study limited to only RCTs?
- * What were your primary outcomes measured?

Results

- * Should list something about how many patients total were included in the meta-analysis
- * All of the results section talks about the selection of papers for the study, what about actual data? Outcomes that were measured? A table about functional outcomes, operative time, etc

Discussion:

- * Needs some proofreading
- * There does seem to be some interesting findings that may help surgeons make better decisions, I would like these findings to be explained better above.
